

B2-agonists with a rapid onset of action

β 2-agonists with rapid onset of action (RABA = rapid-acting beta agonists) are drugs used as relief drugs in the treatment of asthma bronchiale.

Drug group includes:

- inhaled β 2-agonists with a short-term effect (SABA = short-acting beta agonists)
 - **fenoterol**,
 - **salbutamol** and
 - **terbutaline**,
- inhaled β 2-agonist with a long-acting effect (LABA = long-acting beta agonists)
 - **formoterol**
