

Adductor Canal

English: Adductor canal, Hunter's canal

Latin: *Canalis adductorius*

The **adductor canal (Hunter's canal, lat. *canalis adductorius*)** is bounded:

- in front and laterally by vastus medialis (part of quadriceps femoris)
- behind by adductor longus and adductor magnus
- covered in by a strong aponeurosis (lamina vastoadductoria) which extends from vastus medialis, across the femoral vessels to adductor longus and magnus

The canal contains:

- the femoral artery and femoral vein
- the saphenous nerve
