

Chemotherapeutic Regimens

Chemotherapeutic Regimen is usually a well-established combination of chemotherapeutics used to treat cancer. Medical reports often only provide abbreviations for each regimen. In the following table you will find the abbreviation, the drugs contained and the possible indication.

 **This page does not serve as a guide for the indication of chemotherapeutic regimens!**

Abbreviation	Medicines	Possible Indication
ABVD	Adriamycin, Bleomycin, Vinblastine, Dacarbazine	Hodgkin's lymphoma
AC	Adriamycin, Cyclophosphamide	Breast cancer
BEACOPP	Bleomycin, Etoposide, Adriamycin, Cyclophosphamide, Oncovin (Vincristine), Prednisone, Procarbazine	Hodgkin's lymphoma
CMF	Cyclophosphamide, Methotrexate, Fluoruracil	Breast cancer
COP	Cyclophosphamide, Oncovin (Vincristine), Prednisone	Folicular Lymphoma
CHOP	Cyclophosphamide, Adriamycin, Oncovin (Vincristine), Prednisone	Folicular Lymphoma
CVD	Cyclophosphamide, Dacarbazine, Vincristine	Pheochromocytoma, Plasmacytoma
EC	Epirubicin, Cyclophosphamide	Breast cancer
EP	Etoposide, Cisplatin	
FAC	Fluoruracil, Adriamycin, Cyclophosphamide	Breast cancer
FAM	Fluoruracil, Adriamycin, Mitomycin C	
FEC	Fluoruracil, Epirubicin, Cyclophosphamide	Breast cancer
FUFA	Fluoruracil, Leucovorin	
GC	Gentamycin, Cisplatin	
MVAC	Methotrexate, Vinblastin, Adriamycin, Cisplatin	
VAD	Vincristin, Adriamycin, Dexamethasone	Plasmacytoma
