

Obstetric history

- During the first interview, the doctor should be calm, matter-of-fact, friendly in order to gain the trust of the pregnant woman.
- RA and OA must express a genetic, epidemiological and social component.
- We always specify important data from pre-disease in the sense of "when, where, what, how and subsequent complications."

Family history

- Diseases with a tendency to hereditary occurrence (DM, hypertension, oncological diseases, VVV and VSV, psychiatry, multiple pregnancies, coagulation disorders).
- Chronic and acute infections occurring in the family (TB, hepatitis, ...).

Personal History

We proceed systematically from childhood, examining the occurrence of congenital developmental defects.

We ask about:

- common childhood diseases;
- disorders of somatic development, nutrition, locomotor system (mainly pelvis and hips);
- internal disease, whether takes any drugs;
- allergy;
- experienced infectious diseases (especially for infectious mononucleosis, infectious hepatitis);
- psychiatric diseases;
- epilepsy.

Gynecological history:

- period of menarche;
- regularity of the cycle (disorders call into question the correct estimation of the due date);
- inflammations (PID), tumors, incontinence, breast diseases;
- intrauterine device (IUD);
- hormonal contraception;
- sexually transmitted diseases (STDs);
- we will describe in detail past pregnancies;
- miscarriages and abortions – we are interested in the week of gestation, method and causes, complications, detected fetal anomalies;
- for surgical procedures, cesarean sections – we are interested in causal indications for the procedure;
- we ask about the course of sixteen months, infections, uterine involution disorders, healing disorders, lactation, ...
- we are interested in the course of the current pregnancy – planned/unplanned, how easily the woman got pregnant, questions about previous prenatal care and screening results, gestational diabetes mellitus, bleeding during pregnancy, GBS positivity/negativity, hospitalization during pregnancy, ...
