

Portal: Questions for Final Examination in Restorative Dentistry (1LF, D)

List of questions - Restorative Dentistry

1

- a) Hard dental tissues – histology and pathomorphology
- b) Lateral condensation of gutta-percha - step by step

2

- a) Aetiology and pathology of dental caries, classification of dental caries
- b) Isolation and moisture control – rubber dam etc

3

- a) History and examination in restorative dentistry
- b) Influence of calcium hydroxide on pulp, formation of dentin bridge

4

- a) Defence mechanisms against caries, importance of fluoride ions
- b) Question of the focal infection in restorative dentistry

5

- a) Classification of dental materials in restorative dentistry
- b) Periapical surgery, hemisection, premolarization of the tooth

6

- a) Rules of preparation of hard dental tissues
- b) Root canal instruments division and properties

7

- a) Clinical picture of dental caries, objective and subjective symptoms
- b) Necrosis, gangrene – diagnosis and therapy

8

- a) Classification of dental caries according to Black and Mount
- b) Reversible stages of dental pulp – diagnosis and therapy

9

- a) Caries pulpaе proxima - diagnosis and therapy
- b) Irreversible stages of dental pulp – diagnosis and therapy

10

- a) Caries ad pulpam penetrans – diagnosis and therapy
- b) Anatomy and morphology of each tooth – access cavity, number of root canals

11

- a) Amalgam composition , properties
- b) Differential diagnosis of pain in edentulous jaw

12

- a) Amalgam – indications, clinical procedure
- b) Division of pathological stages of the pulp – histological

13

- a) Composite resins – composition and properties
- b) Division of pathological stages of the pulp – clinical

14

- a) Composite resins – indication and clinical procedure
- b) X – ray examination in endodontics

15

- a)Adhesive systems, classification, principles of bonding, instruction for use
- b)Indications and contraindications of endodontic therapy

16

- a) Glassionomer cements – composition and properties
- b) Vital pulpectomy – indications and contraindications

17

- a) Glassionomer cements – indications and clinical procedure
- b) Mortal endodontic treatment – agents, risks

18

- a) Ca(OH)_2 – possibilities of the use
- b) Root canal treatment – access cavity, pulpectomy

19

- a) Class I. cavities (Black)
- b) Root canal treatment – working lenght determination

20

- a) Class II. cavities (Black)
- b) Root canal treatment – instrumentation techniques

21

- a) Class III. cavities (Black)
- b) Root canal treatment – obturation techniques

22

- a) Class IV. cavities (Black)
- b) Antimicrobial agents in endodontics

23

- a) Class V. cavities (Black)
- b) Materials for root canal obturation

24

- a) Class VI. cavities (Fusayama)
- b) Acute periodontitis – symptoms, therapy

25

- a) Sandwich restoration, tunnel preparation, aproximal aproach
- b) Chronical periodontitis – symptoms, therapy

26

- a) Inlay, onlay and overlay
- b) Complications of endodontic treatment

27

- a) Interdisciplinary problems between restorative dentistry and other dental disciplines
- b) Postendodontic treatment

28

- a) Instruments and devices in restorative dentistry
- b) X – ray control of endodontic treatment results

29

- a) Traumatic injuries of the crown
- b) Apexification

30

- a) X-ray Examination in Restorative Dentistry
- b) Coronal pulpectomy (deep) and partial pulpectomy (Cvek) – indications and clinical procedure
