

Template:Term

i Documentation [=edit edit (https://www.wikilectures.eu/index.php?title=template:term/documentation&action=)] [page history (https://www.wikilectures.eu/index.php?title=template:term/documentation&action=history)] [empty memory (https://www.wikilectures.eu/index.php?title=template:term&action=purge)]

The **Term** template identifies an article as a dictionary entry. It is used for short articles, e.g. definitions of terms (Leukocyte). When using a term, the following applies:

- should include **used literature**. An exception is if it is an explanation of a commonly known medical term (e.g. Visceral);
- be **concise**, e.g. a few sentences and one figure. If the article is expanded, the template entry should be removed;
- a brief entry and a more extensive article can coexist.

Articles tagged with the "term" template are automatically included in vocabulary. The template also inserts a command that disables links to edit parts of the article that appear on the right side (`__NOEDITSECTION__`) and a command that hides automatically generated content (`__NOTOC__`).

Inserting the template

To use the template, paste the following code above in the article text:

```
{{Term}}
```

Your term will be automatically included in the Category:Term.

Example of use

```
{{Term}}  
Bacteremia is a condition in which...
```

creates:

Bacteremia is a condition in which...
