## *Medical Informatics*

### Use of emergency medical services

Generally emergency medical services are used to quickly transport patients to hospitals. They can be called from everybody who needs a urgent transport to the hospital.

#### Why are emergency services quicker than normal cars

Emergency services have usually some more rights when driving. Normal car drivers have to provide precedence. Although emergency services of course have to take care on the normal transport.

How does I recognize a emergency medical service Here, you can see a photo of the Philadelphia Fire Department medic unit:
