

Endoscopy in Plastic Surgery

This article has been translated from WikiSkripta; ready for the **editor's review**.

- **Advantages:** safety, effectiveness, small scars, low morbidity, reduced pain, shorter hospitalization + incapacity for work, reduced incidence of infectious complications and hematomas.
- **Disadvantages:** initial costs, contraindications for endoscopic procedures.
- **Reconstructive surgery:** subsurface tissue manipulation from a remote approach with minimal scarring; placement of tissue expanders; muscle flap, fascia, vein/nerve graft acquisition; treatment syndrom canalis carpi
- **Aesthetic surgery:** minimization of scars; forehead lift + brow lift (lowering of the forehead and eyebrows), supplement to face lift + neck lift, augmentation mammoplasty, abdominoplasty etc.
