File usage

The following 3 pages use this file:

- Blood sampling for examination
- Congenital disorders of phenylalanine metabolism
- Hyperphenylalaninemia

Metadata

This file contains additional information, probably added from the digital camera or scanner used to create or digitize it.

If the file has been modified from its original state, some details may not fully reflect the modified file.

Image title	The blood of a two week-old infant is collected for a Phenylketonuria, or PKU, screening Dec. 12 at Eielson Air Force Base, Alaska. PJU is a recessive genetic disorder that can cause problems with brain development, which could lead to mental retardation and seizures. All infants born at Eielson are screened for PKU at their two week well baby check up appointment. (U.S Air Force photo/Staff Sgt Eric T. Sheler)
