

# Ganser's syndrome

Template:Infobox - onemocnění

**Ganser's syndrome** is a dim state that belongs to the qualitative disorders of lucidity . This is a psychogenically induced state in difficult situations (e.g. in custody - hence the name **prison psychosis** ). include **Symptoms** : grossly false but reasonable answers to questions, infantile speech, and lapses in memory of basic life events.<sup>[1]</sup> on the EEG It does not show any specific changes.<sup>[2]</sup> Example: the patient barks instead of greeting.
