

Histology MCQs/Mock Credit Test B

Mock credit test. Only one answer is correct, minimal score is 18 points.

- 1 Which technique is the best for proof of elastic fibers?
 - ☐ silver impregnation
 - ☐ Masson's trichrome
 - ☐ orcein
 - ☐ AZAN
- 2 Which structure is staining by dyes of Sudan line/family/group?
 - ☐ mucopolysaccharides
 - ☐ neutral lipids
 - ☐ glycogen
 - ☐ DNA
- 3 Microtubules:
 - ☐ are composed of tubuline pentamers
 - ☐ are composed of actin pentamers
 - ☐ are composed of tubuline dimers
 - ☐ are composed of actin dimers
- 4 Dyneins:
 - ☐ are stabilizing proteins associated with intermediate filaments
 - ☐ are motor proteins associated with intermediate filaments
 - ☐ are stabilizing proteins associated with microtubules
 - ☐ are motor proteins associated with microtubules
- 5 Mitochondria:
 - ☐ contain circular DNA without genetic information
 - ☐ contain linear DNA without genetic information
 - ☐ contain circular DNA with genetic information
 - ☐ contain linear DNA with genetic information
- 6 Kinocilia:
 - ☐ their main cytoskeleton is of microtubules
 - ☐ their motor protein is a kinesin
 - ☐ are immotile (=no main movement)
 - ☐ are on basal pole of the cell
- 7 Serous cells
 - ☐ their nucleus is condensed
 - ☐ takes place in the pancreas only
 - ☐ are a kind of fibroblasts
 - ☐ produce enzymes
- 8 Basal labyrinth:
 - ☐ takes place in neighborhood of the terminal web
 - ☐ is the same structure as the basal striation
 - ☐ contains cisterns of Golgi apparatus
 - ☐ is strongly basophilic
- 9 Brush border:
 - ☐ is common structure in stratified squamous epithelium

Leonid Pasternak (1862-1945): Night Before Exam

- ☐ main function is transportation of layer of mucus
- ☐ contains numerous mitochondria
- ☐ is composed of microvilli

10 Basal membrane contains:

- ☐ type I collagen
- ☐ type II collagen
- ☐ type II collagen
- ☐ type IV collagen

11 Which of following cell adhesion does not take place in the intercalated disc?

- ☐ zonula occludens
- ☐ fascia adherens
- ☐ gap junction
- ☐ desmosome

12 Histiocytes:

- ☐ are tissue macrophages
- ☐ are stem cells
- ☐ produce histamine
- ☐ produce heparin

13 Hyaline cartilage:

- ☐ does not contain type II collagen
- ☐ has no fibrillary component of ECM
- ☐ has no vessels (=is avascular)
- ☐ has no perichondrium

14 Elastic fibers:

- ☐ are composed of elastin and type III collagen
- ☐ are composed of elastin and type II collagen
- ☐ are composed of elastin and fibrillin
- ☐ are composed of elastin only

15 Destruction of bones:

- ☐ precursors of bone-destroying cells are produced in the bone marrow
- ☐ main bone-destroying cells are activated osteocytes
- ☐ does not start before the bird
- ☐ is pathological in adult body

16 Osteoid:

- ☐ is ECM of actually destroyed bone in which was dissolved an inorganic part
- ☐ is a cartilaginous model of the bone during chondrogenic ossification
- ☐ is ECM of newly produced bone without an inorganic part
- ☐ is other name for the primary bone

17 Brown adipose tissue:

- ☐ adipocytes has short life-span
- ☐ is mainly storage of energy
- ☐ adipocytes are multilocular
- ☐ is avascular

18 Proteoglycans

- ☐ are supramolecular aggregates composed mainly of hyaluronic acid
- ☐ are composed of a core protein and glycosaminoglycans
- ☐ are composed of a core protein and oligosaccharides
- ☐ are composed of a core protein and polysaccharides

19 Reticular connective tissue:

- ☐ does not take place inside the lymph node
- ☐ special staining is Feulgen's stain
- ☐ reticular fibers are PAS positive
- ☐ takes place inside the thymus

20 Where takes place dense regular connective tissue?

- ☐ wall of the intestine
- ☐ wall of the stomach
- ☐ under epidermis
- ☐ in tendon

21 Which part of troponine binds calcium?

- ☐ TnC
- ☐ TnI
- ☐ TnT
- ☐ none of them

22 Sarcomere:

- ☐ is part of myofibril between two A bands
- ☐ is part of myofibril between two M bands
- ☐ is part of myofibril between two T tubules
- ☐ is part of myofibril between two Z lineages

23 Neurons:

- ☐ the most common type of neuron in a bipolar neuron
- ☐ multipolar neurons have no more than one dendrite
- ☐ neurons have no more than one axon
- ☐ mitoses are common among neurons

24 Schwann cells:

- ☐ produce myelin in CNS and PNS
- ☐ produce myelin in CNS only
- ☐ produce myelin in PNS only
- ☐ have nothing to do with myelin

25 Azurophilic granules:

- ☐ are inside granulocytes only
- ☐ are inside platelets only
- ☐ are mitochondria
- ☐ are lysosomes

26 Neutrophils:

- ☐ according to number of segments are classified to Arnneth's classes
- ☐ are uncommon in the peripheral blood
- ☐ have no phagocytic ability
- ☐ produce antibodies

27 Hepatolienal period of hematopoiesis:

- ☐ starts inside liver after 6th week
- ☐ normoblasts contain hemoglobin HbA
- ☐ only red blood cells are produced
- ☐ continues to the adulthood

28 Orthochromatophilic erythroblast

- ☐ has diameter 8 - 10 μ m
- ☐ undergoes mitoses
- ☐ has no nucleus
- ☐ is basophilic

29 Which type of epithelium is on the schema?

- ☐ pseudostratified columnar epithelium
- ☐ stratified columnar epithelium
- ☐ simple columnar epithelium
- ☐ urothelium

30 Which tissue is on the picture?

- ☐ dense irregular connective tissue
- ☐ dense regular connective tissue
- ☐ skeletal muscle
- ☐ cardiac muscle
