

Membrane Protein

Membrane proteins are proteins that are incorporated into the phospholipid bilayer of the cell membrane. Divided into:

- *'peripheral'* proteins - they do not pass across the entire membrane, but are located on the inside or outside of the cell membrane,
- **integral** proteins - pass through the entire phospholipid bilayer one or more times.

Membrane proteins serve, for example, as ion channels, membrane receptors or ensure the transport of various substances across the membrane.
