

# Musculus brachialis

Musculus brachialis belongs to the anterior group of muscles of the arm. A large part of its course is covered by the biceps, which crosses over it.

**Beginning:** *anterior* surface of the *humerus*, from the attachment of the m. deltoideus to the elbow joint.

**Extension:** *tuberositas ulnae* to *proc. coronoideus ulnae*.

**Innervation:** *n. musculocutaneus* (C5 and C6).

**Function:** flexion at the elbow joint.

**Vascular supply:** *a. brachialis*
