

Musculus tensor fasciae latae

Origin: spina iliaca anterior superior, part of labium externum cristae iliacae

Insertion: tractus iliotibialis

Inervation: nervus gluteus superior (z L₄-S₁)

Function: flexion, abduction, internal rotation at the hip joint , maintains extension at the knee joint

Tractus iliotibialis : is a thickened tendon strip located on the lateral side of the thigh, to which *the tensor fasciae latae muscle* attaches from the front and *the glutaeus maximus muscle* from the back . It descends to the knee joint and attaches to *the condylus lateralis tibiae* , maintains the stability of the knee, and also fixes the lumbar joint.
