

# Overview of Bacteria

*Text intended for repetition for microbiology exam.*

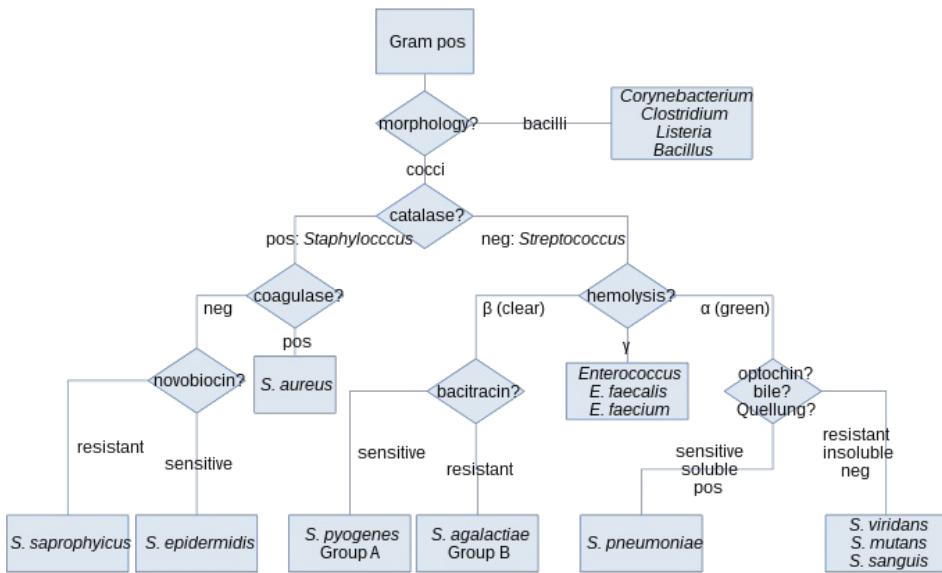

## Gram-negative Bacteria

Genus	Species	Properties	Culture agar	Pathogenicity	Transmission	Disease	Diagnostics	Therapy
Helicobacter	pylori	microoxyphilic, mobile, G-, rods, ferments AMK, not carbohydrates	chocolate agar, Thayer-Martin (3-7days)	adhesins, flagella, urease	fecally-orally	acute gastritis, chronic gastritis	microscopy (HE, Gram, Warthin-Starry), cultivation, urease test, breath test, serology	AMO + KLA H <sup>+</sup> pump inhibitor / AMO + MET + bismuth
Legionella	spp., pneumophilica	mobile, aerobic, G-, slender rods, pleomorphic, two flagella, catalase positive	BCYE (buffered charcoal yeast extract) - 2,3-dihydroxy fatty acids, weak, CO <sub>2</sub> , 25–43 °C	hemolysin, cytotoxin, endotoxin, DNase	inhalation, not from humans, reservoir standing water	pneumonia, pontic fever, legionary fever		ERY + RIFAMPI / CIPROFLOX / OFLOX, <b>not β-lactam</b>
Bordetella	pertussis	G-, immobile ovoid short rods, obligate aerobe, ferments amino acids, <b>not carbohydrates</b> , requires NAD, virulent strains hemolyses, bipolar metachromatic granule (toluidine blue)	Bordet-Gengou (penicillin present)	filamentous haemagglutinin, pertussis toxin, haemolysin,...	droplets, reservoir human	whooping cough (last stage in the absence of bacteria)	direct fluorescence (nasopharyngeal aspirate), PCR, Ig-ELISA (control only, positive in later stages), culture insensitive (point of care inoculation), non-specific microscopy	supportive treatment of respiratory epithelial damage, bacteria are no longer present in the late stages <b>(ATB unnecessary)</b>
Haemophilus	spp.	small immobile non-sporulating pleomorphic rods, facultatively aerobic, capnophilic, G-	chocolate agar, Levin's agar (Staphylococcus aureus; satellite growth), needs NAD (P) and hemin (factors X and V)				meningitis, epiglottitis, arthritis, sinusitis, otitis, pneumonia, conjunctivitis, Brazil purple fever, chancroid	in the Czech Republic β-lactam (foreign strains tend to be resistant), amoxicillin, cotrimoxazole
