

Pattern status presence

Internal

Conscious, fully mobile, cooperates, without prejudice to orientation, verbal communication clear and understandable; normosthenic type, adequate nutritional and muscular condition; skin without pathological efflorescences, anicteric, non-cyanotic, without signs of bleeding, adnexa without deviations, mucous membranes moist without coating; eupnoea; ameningeal, without abnormal movements, approximately neurologically normal; turgor skin not reduced, muscle tone appropriate to age, afebrile, patient afebrile.

'Head:' knock painless; bulbs in middle position, movable in all directions; anterior sclera, pink conjunctiva, isoric pupils, exposure to exposure present; language crawls in the middle.

'Neck:' nodules and shields not enlarged; pulsations of the carotid arteries, symmetrical without murmur; jugular vein filling not increased.

'Chest:' symmetrical; regular heart action, sounds bounded without murmurs, point stroke invisible, heart not enlarged; breathing clean, atrial, without side effects.

'Breasts:' *soft, palpable, free of disease.*

'Abdomen:' in level, aperitoneal, palpably painless; non-resistive peristalsis; liver or spleen not enlarged, tapotement negative bilaterally.

'HD:' without swelling, inflammation, varicose veins; calves loose, painless; pulsation in the peripheral palpable.

'Per rectum:' firm sphincter, ampoule loose with remnants of brown stool, smooth walls without pathological finding, *elastic prostate unhealed.*

'Weight:' kg **'Height:'** cm **'HM:'** torr **'AS:'** /min **'DF:'** /min

'ECG:'

Neurology

'Overall condition:' conscious; orientation by time, place and person; cooperates, speech without aphasia; without sphincter defects.

'Skin and adnexa:' skin of normal color, no signs of cyanosis or jaundice.

'Head:' painless, atraumatic; lymph nodes in typical sites do not touch, thyroid gland not enlarged.

'Cranial nerves:' isochoric pupils, direct and indirect photoreaction normal; bulbs free, nystagmus absent; appreciates and frowns symmetrically; language crawls in the middle.

'Neck:' ameningeal neck, carotid pulsation without murmurs.

'Chest:' symmetrical, ventricular respiration, heart sounds limited.

'HKK:' tone sym. in the norm, rr. C5-8 sym. medium, in Mingazzini without declines, taxa in the norm sym., diadochokinesis in the norm sym., tremor resting neither postural nor action absent.

'Abdomen:' palpable, palpably painless, aperitoneal, rr. skin abdominal sym. outfit.

'DKK:' tone sym. in the norm, rr. L2 - S2 sym. medium, in Mingazzini without dips, Lasègue 90/90 °, Babinski bilaterally unequipped, taxe sym. in the standard.

'Spine:' in axis, percussive, painless, momentum C, Th and LS spine free, Thomayer 0, tilt free.

'Stop, walk:' Romberg negative, Hautant without limb deviation.

'Feeling:' tactile and deep in the norm without outages, perianogenital without pathological abnormalities.
