

# STAT laboratory tests

From the point of view of speed, it is possible to distinguish between *routine*, *static* and *vital indication* examinations. The results of static examinations are usually announced by the laboratory **within 8 hours** by telephone (or electronically).

- Serum ionogram – Na<sup>+</sup>, K<sup>+</sup>, [[Chlorides|Cl<sup>-</sup>]], Ca<sup>2+</sup>, Mg<sup>2+</sup>, phosphatey
- Urine ionogram – Na<sup>+</sup>, K<sup>+</sup>, Cl<sup>-</sup>, Ca<sup>2+</sup>, Mg<sup>2+</sup>, phosphates
- Indicators of acid-base balance and lactate
- **Astrup** - pH, pO<sub>2</sub>, pCO<sub>2</sub>, HCO<sup>3-</sup>, BE
- Urine examination – urea, creatinine in serum and urine, creatinine clearance, nitrogen balance, uric acid
- Liver examination – bilirubin, ammonia, ALT, AST, GGT, ALP, LD, amylase, lipase
- Examination of metabolism – glucose, cholesterol, triacylglycerols
- Nutrition examination – albumin, prealbumin, transferrin
- Cardiomarkers – CK, CK-MB, CK-MB mass, myoglobin, troponin T or I
- Markers of inflammation – CRP, procalcitonin
