

Talipomanus

- **longitudinal defect of the radius** (partial or complete)
- **varus deviation of the hand** at the wrist, limitation of movement at the wrist and elbow
- defect associated with malformation of the thumb (hypoplasia and aplasia), defects of the heart, kidneys and especially thrombocytopenia
- **therapy:** straightening orthoses (affecting the varus of the hand), later surgery (displacement of the distal end of the ulna to the center of the wrist / replacement of the missing radius with a bone graft)^[1]
