

Treatment of tracheobronchitis

Acute

Treatment of the symptoms is usually enough.

- antipyretics
- oxygen therapy
- **rest**
- antitussives
- expectorans
- **β2-Sympatomimetics**

Antibiotics - when providing bacterial etiology:

- *aminoPNC* +/- B - lactamase inhibition
- *makrolides*
- *TTC*
- *Cef 2.g*
- *co-trimoxazol*

Chronic

Chronic cough - oxygen therapy, cold air inhalation / corticosteroids

Obstruction - endoscopy + mucus removal -> examination > antibiotics

Acute bacterial tracheitis - intubation until the mucus and fever disappear

Stenoses - endoscopic recanalization
