

Trigonum deltoideopectorale

Trigonum deltoideopectorale or ***trigonum clavipectorale*** or ***fossa Mohrenheimi*** is a triangular landscape below the clavicle, the base of which is oriented cranially, the apex caudally, continues in the groove between *m. deltoideus* and *m. pectoralis major* (*sulcus deltoideopectoralis*), in which the *v. cephalica* runs.

Boundary

- cranially: *clavicula*;
- laterally: *m. deltoideus*;
- medially: *m. pectoralis major*;
- bottom: superficially, the transition of the *fascia pectoralis superficialis* in the *fascia deltoidea*, in the depth of the *fascia clavipectoralis* and *m. pectoralis minor*, which is attached to the fascia.

Contents

- *v. cephalica* – flows into *v. axillaris*;
- *a. and v. thoracoacromialis* – from *a. axillaris*, or to *v. axillaris*;
- *nn. pectorales* (med. et lat.) – from *pars supraclavicularis plexus brachialis*.

Communication

Trigonum deltoideopectorale communicates with the axillary opening in the clavipectoral fascia (***fossa ovalis infraclavicularis***), through which the *v. cephalica* and the *vasa thoracoacromialia* run.
