

Veillonella

The genus *Veillonella* is one of the gram-negative anaerobic cocci, which usually form clusters or pairs. Under UV light, they are red fluorescent. It belongs to the natural flora of the oral cavity, nasopharynx, digestive tract and female genitalia. They can cause mixed infections, exceptionally they have been identified as agents of meningitis, osteomyelitis and periodontal infections. This genus includes *V. parvula*, *V. montpellierensis* or *V. alcalescens*. *V. parvula* may cause endocarditis. ^{[1] [2] [3]}
